A. Installation :

1. Install like normal component

2. Installation only required on source not in target

B. Configration

Config File : pushtotargetridc_environment.cfg

Location : <domain>/ucm/cs/custom/pushtoTargetRIDC

1. Make sure that source host/IP details added in target config.cfg

Variable : SocketHostAddressSecurityFilter

2. Update pushtotargetridc_environment.cfg   of source :

TargetServer=idc://10.184.36.140:4997   (idc port is recommend, http can
be used)
TargetUsername=
TargetPassword=

PRQuery (Query which eligible for replication in source)

Example :

PRQuery=dSecurityGroup='Public'

CommitOnlyReleased= (it will commit only released content , if DONE status content
want to replicate change to false)

EnableReplication : Flag to control automatic replication .

3. Try to replicate one content and (folder) manually

This step is important . There might be chance that some of the metadata and values
not in target and replication will fail

4. If every thing works fine, then enable in cfg file of component

Services :

GET_PUSH_RIDC : To search and commit to target server
PULLRIDC_CONSOLE : Used to diplay acitve contents and commit using
GET_PUSH_RIDC
PULLRIDC_REPORT : Display pullridc table
PULLRIDC_FOLDER_REPORT : Display pullridcfolder table
REPLICATE_ONTHEGO_CONTENT : Replicate content manually .
REPLICATE_ONTHEGO_FOLDER : Replicate folders and contents inside
manually

Parameters :
doCheckinMin : Check the Content in Last <>mins
CommitStatus : Every content set by status , it search or commit by status
doCheckAll   : it will check all the contents with out entrydate in the .

Trace Section : PushRIDC

Action   CommitStauts :

New entry   0

Not Released   1
